

Nätverket Renare Mark

A Swedish network for soil remediation. Our goal is to increase communication and enhance the exchange of experience between different groups of expertise dealing with contaminated soil, sediments and groundwater. The network is open to everyone - consultants, remediation companies, authorities, site owners, developers and scientists etc. The network has reached over 500 members.

Our activities:

- National spring and autumn meetings where current issues of interest are discussed during lectures and workshops
- Regional meetings, locally connected
- An active web page with current news from the remediation field
- A newsletter distributed to network members

Welcome to visit our web page at www.renaremark.se
